

BOILER CONTAINER

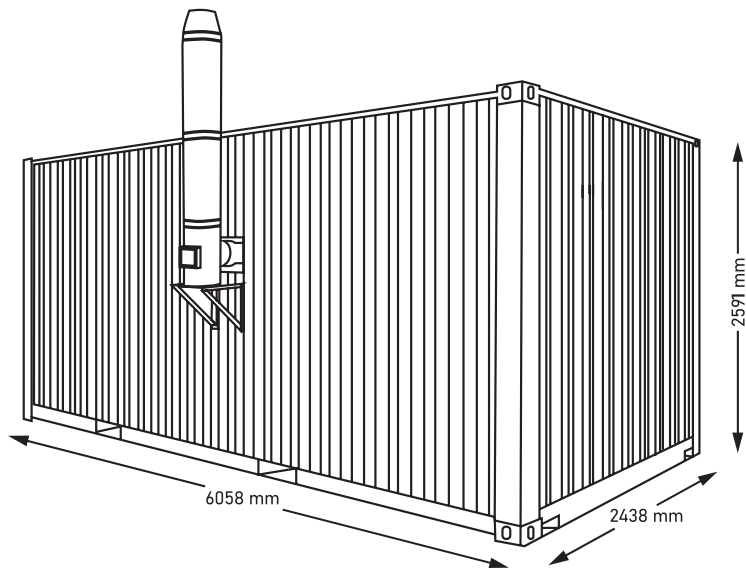

Our Boiler Container is specifically engineered to provide continuous hot water for sanitary containers. This advanced system ensures a reliable supply of hot water through a state-of-the-art design, delivering superior functionality and adaptability for diverse sanitary applications.

- **High Capacity:** Capable of connecting to and supplying hot water to up to 8 containers simultaneously.
- **Advanced System:** Features an advanced oil boiler and heat exchanger system for optimal performance.

- **Remote Control:** Parameters are monitored and managed remotely through a fully automated system.
- **Innovative Efficiency:** Ongoing product enhancements and collaboration with leading component manufacturers drive innovations that boost boiler efficiency and reliability.
- **Custom Solutions:** Our boiler containers can be tailored to meet specific needs.
