

VEHICLE WASH STATION

The Vehicle Wash Station is engineered for the thorough cleaning of trucks and both light and heavy military vehicles. This advanced system is equipped with high-performance jet washers, providing both hot and cold water at adjustable pressures. The station is available in two configurations: a standard version and an elevated model specifically designed for comprehensive chassis washing, ensuring optimal maintenance and operational readiness.

- **Mobility:** Fast and easy installation with the ability for quick relocation.
- **Modular Framework:** standard 3 ft. structure may easily extend if needed.
- **Environmental Sustainability:** Utilizing a closed-loop system, wastewater is collected in a spill tray, where it is efficiently recovered, treated, and recirculated back into the washing process, minimizing water consumption and reducing environmental impact.
- **Outdoor or Indoor Operation:** The station is versatile, functioning as either a standalone unit or integrated into existing facility infrastructure.
- **When equipped with heaters,** it enhances operator comfort, especially in indoor environments, ensuring optimal performance in various conditions.
